Career Objective

To begin my professional journey with passion and dedication in a challenging role that integrates full stack development and AI/ML, enabling me to build data-driven, user-centric solutions. I strive to contribute effectively to team success, adapt to evolving technologies, and continuously enhance my skills to deliver high-quality and innovative results.

Skills

- **Programming** : Python, Java, JavaScript, SQL
- **Frontend** : HTML5, CSS3, React.js
- **Machine Learning** : Scikit-learn, Pandas, NumPy, Feature Engineering, Model Evaluation
- **Deep Learning & NLP** : TensorFlow, Keras, Neural Networks, NLP
- **Generative AI & LLMs** : Prompt Engineering, HuggingFace, LangChain, LangGraph, ChromaDB, RAG
- **Backend & Tools** : FastAPI, Docker, Git/GitHub, PostgreSQL, Jupyter Notebook, Google Colab

Internships

ICore Software Technologies — Python Developer Intern

Feb 2026 – May 2026

- Fine-tuned a BERT-based intent classification model covering data collection, class balancing, training, and API deployment.
- Built an ANPR system using YOLOv8, EasyOCR, and ESRGAN on live RTSP streams.
- Developed React UI components, AI Agent workflows, and a video generation pipeline using image-to-video models.

ICore Software Technologies — Machine Learning Intern

Jul 2025 – Aug 2025

- Applied ML and deep learning techniques for data preprocessing, model training, and evaluation.
- Built foundational experience in end-to-end ML pipelines and performance assessment.

Projects

AI Resume Analyzer Agent

Python, LangGraph, FastAPI, React, LLaMA 3.3, EasyOCR

- Built a full-stack AI-powered ATS system using a 10-node LangGraph agent pipeline that semantically matches resumes against job descriptions, generating ATS scores, skill gap analysis, and career recommendations via LLaMA 3.3 70B (Groq API).
- Implemented multi-format resume parsing (PDF, DOCX, images) with EasyOCR, an explainability engine for structured hiring insights, and a FastAPI + React interface with robust handling of OCR failures and LLM JSON hallucinations.

Automatic Number Plate Recognition (ANPR) System

Python, YOLOv8, EasyOCR, ESRGAN, FastAPI

- Developed a real-time ANPR system for weighbridge CCTV RTSP streams using YOLOv8 for vehicle number plate detection and EasyOCR for text recognition. Enhanced recognition accuracy through ESRGAN-based image enhancement and preprocessing techniques to handle low-resolution, blurred, and low-light frames.
- Solved real-world challenges including varying number plate sizes, motion blur, occluded plates and long-distance vehicle capture. Designed a validation and filtering pipeline to improve plate recognition reliability for automated vehicle identification and operational workflows.

Coffee Shop Revenue Prediction

Python, Scikit-Learn, Pandas, NumPy, FastAPI, Docker

- Built a Linear Regression model with feature engineering and data preprocessing techniques to predict daily coffee shop revenue.
- Achieved an R^2 score of approximately 0.89 and deployed the application using FastAPI, Streamlit, Docker, and Docker Compose.

Education

Gnanamani College of Technology

2022 – 2026

B.Tech Information Technology, Namakkal, Tamil Nadu

Certifications

- Data Analysis and Data Visualization — pencilbitz Aug 2024
- Complete Guide for Campus Interviews (NPTEL) — 73% Feb-Mar 2026
